

$$16 + x^2 = 25$$

$$x^2 = 9$$

$$x = 3$$

$$\therefore \cos A = \frac{3}{5}$$

$$\therefore \cos B = \frac{4}{5}$$

$$\text{답: } A+B = \arcsin(1)$$

$$\therefore \sin(A+B) = \frac{4}{5} \times \frac{4}{5} + \frac{3}{5} \times \frac{3}{5}$$

$$= \frac{16}{25} + \frac{9}{25}$$

$$= \frac{25}{25}$$

$$= 1$$

P. 168.

문제 7.2.4)

$$\arctan\left(\frac{1}{2}\right) + \arctan\left(\frac{1}{3}\right) \text{의 값을 간단히 하여라.}$$

$$\therefore \tan(A+B) = 1$$

$$A+B = \arctan(1)$$

So)

$$\arctan\left(\frac{1}{2}\right) = A \quad \dots \rightarrow \frac{1}{2} = \tan(A)$$

$$\arctan\left(\frac{1}{3}\right) = B \quad \dots \rightarrow \frac{1}{3} = \tan(B)$$

$$\tan(A+B) = \frac{\tan A + \tan B}{1 - \tan A \tan B} = \frac{\frac{1}{2} + \frac{1}{3}}{1 - \frac{1}{2} \times \frac{1}{3}} = \frac{\frac{5}{6}}{1 - \frac{1}{6}} = \frac{\frac{5}{6}}{\frac{5}{6}} = 1$$

P. 169

1. 다음 값은 구하여라.

(1) $\cos^{-1}[\cos(-\frac{\pi}{2})]$

sol.)

$$\cos(-\frac{\pi}{2}) = -1 \quad \square \frac{\pi}{2}$$

$$\cos^{-1}(-1) = A$$

$$-1 = \cos(A)$$

$$A = \frac{\pi}{2}$$

(2) $\sec(\sin^{-1} \frac{3}{4})$

sol.)

$$\sin^{-1}(\frac{3}{4}) = A$$

$$\frac{3}{4} = \sin(A)$$

$$\begin{aligned} b^2 &= a^2 + x^2 \\ 9 &= x^2 \\ x &= \sqrt{9} \end{aligned}$$

$$\sec(A) = \frac{1}{\cos A} = \frac{1}{\frac{4}{5}} = \frac{5}{4} = \frac{5}{4} \sqrt{1}$$

$$\square \frac{5}{4}$$
